Q3 Network Infrastructure Topology

Author: Alice Smith | Classification: Internal Operations

1. Subnet Routing & VLAN Gateway Allocation:
Core database replication clusters reside within isolated VLAN 40 subnet 10.0.4.0/24.
Internal router gateways restrict SSH access exclusively to jump-host IP 10.0.4.1.

2. Distributed Firewall Perimeter Defenses:
Perimeter firewalls inspect ingress packets for anomalous WAF character signatures.
Refer to schematic diagram hosted at /static/system_blueprint.png for hardware layouts.
